“Cyclops” roulette information system with video readout option

- Prompt determination of premium number (1-2 secs)
- Free of optical sensors on roulette wheel
- Automatic adjustment
- Available audio and video outputs
- Illumination of roulette wheel is feasible
- Probable consolidation of scoreboard (panel) in local area network for information exchange and data transmission
- Display of raw statistical details on the scoreboard
- Gathering and processing of statistical information on remote PC
- Probable arrangement of unified game system in casino

“Cyclops” system is designed for integration with roulette wheels having painted separator cells of all commonly used manufacturers

Displays

Cyclops Multimedia Display

Standard Delivery

- Information scoreboard (panel) with built-in small-sized colour camcorder with lens (one or two-sided)
- Information processing and control unit

“Cyclops” multimedia possesses wide multimedia opportunities: displays statistics of games, winning number as animation and winning bets. The acoustics system provides soundtrack.

Information Scoreboard

- This unit is designed for display of information about the premium number. It represents the LCD monitor with camcorder in the united cabinet.

“Cyclops” control unit

This unit is designed for display of information about a game in progress on American roulette. It represents a computer processing composite input video signal in PAL format and transmitting calculation results via RS-232 and Ethernet standard interfaces.

Displays

Cyclops Multimedia Display

High reliability of the system is stipulated by avoidance of any moving parts (fan, HDD, etc) in the control unit.

- Open data exchange protocols allow termination of a set of control unit and portable colour camcorder to the display unit (e.g. scoreboard), as well as consolidation of these units in one network.
